

BERDAL

LET'S BUILD TOGETHER

THE GRIPLINE SERIES FROM BERDAL

GRIPLINE[®]

GRIPLINE DURABLE

Innovation where sustainability is linked to practical use has led to Gripline Durable. That means:

Lightweight

Lighter, yet high-quality material creates fewer CO² emissions and a TÜV-certified strength.

Easy separation

The adapted gradient angle ensures very pleasant handling.

No strong plastic odour

Therefore appealing to give a prominent position on the shop floor.

GRIPLINE ORIGINAL

Our classics, the trusted 'faces' of the Gripline family. Or:

✓ **Uniform**

Unity in appearance and finish over a wide range of buckets and tubs.

✓ **Complete**

A complete range to sell on the shop floor.

GRIPLINE CRANEABLE

Especially for heavy, professional work for the following reasons:

✓ **Reliable and sturdy**

Thanks to extra-reinforced thickness on the sides, tear-resistant materials and heavy-duty handles and lifting lugs.

✓ **TÜV NORD certificate**

Highest NEN standard in the European market.

GRIPLINE SPECIALS

Everything that doesn't fall under Durable, Original or Craneable, but completes the Gripline mix:

✓ Different capacities

Our 100, 125 or 150 litre tubs. Large, sturdy and of course trusted Berdal quality.

✓ Special products

Our Flextubs, mixing tubs or special requests from the market such as buckets in a range of striking colours.

LET'S BUILD TOGETHER

Berdal stands for working together. 'Let's build together' is our invitation to companies in the construction sector, the hardware sector and the DIY sector. We share our knowledge, such as through training sessions and demos by our sales promoter. We provide data management support, including by equipping our customers' ERP systems with product data. We also create market analyses to help customers to compile ranges. In addition, we develop sales campaigns together, thereby building on one another's successes. Let's build together.

SUSTAINABLE ENTREPRENEURSHIP

Berdal is aware of its responsibilities with regard to the environment. For example, we have subscribed to the Plastic Pact. This pact establishes four objectives for the reduction of plastic waste and for increased recycling by 2025. Berdal is also preparing for cradle-to-cradle certification. Berdal is thereby uniting closely with companies that choose sustainability and circularity. At product level, we opt for recycled and recyclable raw materials as far as possible for all our brands, and of course for sustainable production processes.

LET'S CARE TOGETHER

RECYCLING

Berdal uses collected household waste as a basic material for the production of buckets and tubs. All our production waste is reused. We are thereby creating a chain of recycling and are able to manufacture in a very sustainable manner.

BLUE ANGEL ENVIRONMENTAL CERTIFICATION

Our tubs are made of 100% recycled, certified material that has been recovered from plastic household waste. Our buckets are made of 80% recycled, certified material due to the steel bracket. Berdal received Blue Angel certification, the official German environmental certification, for this in 2014! The first and most successful recognised environmental label in the world.

FULL COLOUR, FULL WRAP LABELLING

Berdal offers the possibility of labelling construction buckets by means of 'In Mould Labeling' (IML). The label is applied to the liquid plastic at high temperature. The label is integrated in the injection moulding process as fully as possible. Berdal is the only manufacturer in Europe that provides buckets with a full colour and a full wrap label by means of IML. The name 'full wrap labelling' means that the bucket is completely covered with a label on the outside. Ideal for communicating a marketing message.

WHY BERDAL?

- ✓ Innovation in the Netherlands; production in the Netherlands and Poland
- ✓ Certified, homogeneous regranulated raw materials
- ✓ Guaranteed cadmium-free production
- ✓ Private labelling marketing options
- ✓ Reliable, innovative and service-oriented production company
- ✓ Personal in contact and in customised solutions
- ✓ Unique; full-colour, full-wrap IML labelling
